FREE-STANDING KIOSKS BY CANDELA DISPLAY SYSTEMS

Candela Display Systems offers non-touch and touch-enabled kiosks ideal for interpretive digital signage. Available in portrait and landscape orientations, these portable free-standing kiosks utilize commercial grade components and are plug and play for optimal performance and ease of setup.

BENEFITS OF DIGITAL INTERPRETATION

Today's visitors expect more than just basic, and at times outdated static signage. Simultaneously, digital displays have improved dramatically in quality, reliability, and cost. Interpretive digital signage hosts a number of benefits in that it can convey a message available to many visitors at one time, it is self-sufficient without the requirements of staff to maintain, content is easily updated, and is available 24/7.

Digital signage is also easily upgradeable. Begin with a basic non-touch kiosk and when you are ready, upgrade to a touch enabled unit with interactive content for quick access to desired information.

EVERY CANDELA DISPLAY SYSTEMS KIOSK COMES STANDARD WITH:

- Heavy gauge American steel construction.
- Professional grade 43", 1920 x 1080, 24/7, LED / LCD monitor.
- High performance, Windows based Digital Media Player.
- Power conditioner and surge protection for reliable performance.
- Touch enabled series comes with a 2-point IR touch system, tempered safety glass touch surface, and is USB 2.0 Plug and Play / HID Compliant.

Portrait Upright
